

Perfectly secured and stored in a space-saving manner.

ROWEKO load securing equipment ensures that your transporter is always tidy on the road. The practical lashing strap reel rolls straps cleanly and tidily in just a few seconds. They can thus be quickly stowed, together with their associated ratchets, in the appropriate strap drums or shells.

Individual securing devices for petrol cans, gas cylinders or threaded rods also keep your load handy and exactly where it belongs.

1 Belt retractor
